### Taxonomy

Scientific Name	<b>Tylecodon viridiflorus</b> <b>(Toelken)</b> <b>Toelken</b>
Higher Classification	Dicotyledons
Family	CRASSULACEAE
Synonyms	Cotyledon viridiflora Toelken

### National Status

Status and Criteria	<b>Vulnerable D2</b>
Assessment Date	2015/05/14
Assessor(s)	L. von Staden
Justification	A range-restricted (EOO 183 km <sup>2</sup> ), localized habitat specialist, known from four locations and potentially threatened by habitat degradation and trampling due to overstocking of livestock.

### Distribution

Endemism	South African endemic
Provincial distribution	Northern Cape
Range	Central mountain ranges of the Richtersveld.

### Habitat and Ecology

Major system	Terrestrial
Major habitats	Lekkersing Succulent Shrubland, Central

<b>Description</b>	Richtersveld Mountain Shrubland Shaded rock crevices, on steep south-facing slopes, cliffs and gullies, 600-900 m.
--------------------	--

## Threats

---

This species' habitat is affected by moderate to severe overgrazing, causing erosion and a loss of vegetation cover in places. Tylecodon species are not palatable and unlikely to be browsed, and this species' preference for rocky, steep slopes and cliffs, which is generally inaccessible to livestock, may offer it some protection against trampling and erosion.

## Population

---

A rare habitat specialist, known from only a few collections.

**Population** Stable trend

## Assessment History

---

Taxon	Status	Citation/Red List version
assessed and Criteria		
Tylecodon viridiflorus (Toelken) Toelken	<b>VU</b>	D2 2015.1
Tylecodon viridiflorus (Toelken) Toelken	<b>Rare</b>	Raimondo et al. (2009)
