Taxonomy

Scientific Name **Bulbine fragilis**
G.Will.

Higher Classification
Family Monocotyledons
ASPHODELACEAE

National Status

Status and Criteria **Rare**

Assessment Date 2008/03/22

Assessor(s) D. Raimondo

Justification A habitat specialist recorded from two sites. Rare but not threatened.

Distribution

Endemism South African endemic

Provincial distribution Northern Cape

Range North of Steinkopf and near Nuwerus.

Habitat and Ecology

Major system Terrestrial

Major habitats Succulent Karoo

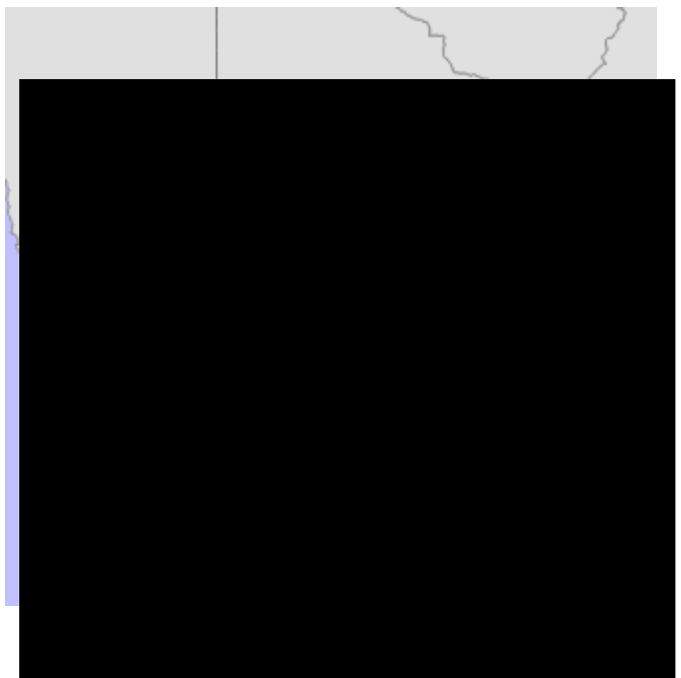

Description In pebbly, loose soil shaded by overhanging rocks.

Population

Population trend Stable

Assessment History

Taxon assessed	Status and Criteria	Citation/Red List version
Bulbine fragilis	Rare	Raimondo et al. (2009)
