Taxonomy

Scientific Name **Oxalis filifoliolata**
J.Suda & Krejčíková

Higher Classification Dicotyledons

Family OXALIDACEAE

National Status

Status and Criteria **Vulnerable D2**

Assessment Date 2014/05/02

Assessor(s) J. Suda, K.C. Oberlander & D. Raimondo

Justification Currently known from only one location in a habitat that is potentially threatened by crop cultivation and mining.

Distribution

Endemism South African endemic

Provincial distribution Northern Cape

Range Gannabos, between Loeriesfontein and Nieuwoudtville.

Habitat and Ecology

Major system Terrestrial

Major habitats Hantam Karoo

Description Open, sunny places in dry stony hills and flats.

Threats

Habitat of this species has been lost in the past to crop cultivation. It remains potentially threatened by crop cultivation and also by mining.

Population

The population is large, consisting of several thousand individuals spread over approximately two kilometres.

Population trend Stable

Assessment History

Taxon	Status assessed and Criteria	Citation/Red List version
Oxalis filifoliolata J.Suda & Krejčíková	VU D2	2014.1
