Taxonomy

Scientific Name	Bulbine monophylla Poelln.
Higher Classification	Monocotyledons
Family	ASPHODELACEAE

National Status

Status and Criteria	Critically Endangered B1ab(iii)
Assessment Date	2008/03/22
Assessor(s)	D. Raimondo & N.A. Helme
Justification	EOO <100 km ² , one known location remain after habitat loss to wheat cultivation in the past. It continues to decline due to habitat degradation as a result of alien grass infestation and overgrazing.

Distribution

Endemism	South African endemic
Provincial distribution	Western Cape
Range	Porterville and Tulbagh.

Habitat and Ecology

Major system	Terrestrial
Major habitats	Swartland Alluvium Fynbos
Description	Edges of vleis.

Threats

Most of this highly localized species' habitat has been lost to crop cultivation and only one known subpopulation remains on a small fragment of natural vegetation near Porterville. The population continues to decline due to alien grass invasion and overgrazing.
