Taxonomy

Scientific Name **Gasteria ellaphieae Van Jaarsv.**

Higher Classification Monocotyledons

Family ASPHODELACEAE

National Status

Status and Criteria **Rare**

Assessment Date 2007/08/07

Assessor(s) E.J. van Jaarsveld, A.P. Dold & D. Raimondo

Justification Known from three collections near Patensie. Not threatened as subpopulations occurs within a protected area and are very isolated.

Distribution

Endemism South African endemic

Provincial distribution Eastern Cape

Range Patensie, southern end of the Baviaanskloof.

Habitat and Ecology

Major system Terrestrial

Major habitats Fynbos

Description Steep, south-facing slopes in subtropical thicket vegetation, in rock crevices.

Threats

Search for images of *Gasteria ellaphieae* on [iNaturalist](#)

No threats: this species occurs within remote areas in a protected wilderness area.

Population

Plants grow singly or in small groups usually in shade and may be difficult to spot if not in flower.

Population trend Stable

Assessment History

Taxon assessed	Status and Criteria	Citation/Red List version
Gasteria ellaphieae Van Jaarsv.	Rare	Raimondo et al. (2009)
Gasteria ellaphieae Van Jaarsv.	Rare	Hilton-Taylor (1996)
